Re: Biennial Report of the Missouri Sentencing Advisory Commission

Dear Sirs:

On behalf of the Missouri Sentencing Advisory Commission, I am pleased to send you the Commission's Biennial Report 2007, pursuant to section 558.019.6. The Report includes sentencing data through the end of fiscal year 2007 and statutory changes effective August 28, 2007. The Report is accompanied by a Users' Guide which contains the Commission's System of Recommended Sentencing.

The data in this Report show that public safety – the commission's primary goal – has been enhanced through the system of recommended sentences, especially since 2005 when probation officers on a statewide basis began presenting pre-sentence information to courts and attorneys in the Sentencing Assessment Reports.

The Commission commends the research staff of the Department of Corrections and its manager, David Oldfield, for the great work in producing this Report. The Reports data display the successful results of cooperation among the Department of Corrections, the

Board of Probation and Parole, and the Judiciary. We are grateful for the continuing support of Director Larry Crawford, the Board of Probation and Parole, including chief probation supervisor Scott Johnston and the dedicated men and women who serve as probation and parole officers.

The Report contains the Commission's first study of recidivism (pages 42-46) under the commission's system of recommended sentences, which is based in part upon analysis of risk factors. The sentencing recommendations, in the large number of cases where the courts follow them, are shown to result in lower rates of recidivism:

"When the recommended sentence is probation and the actual sentence is also probation, which occurs in 77% of probation recommended sentencing, the recidivism rates are low. When the recommended sentence is Probation and the actual sentence is Prison then the recidivism rates are much higher, whether measured by new incarcerations or new convictions and the rates are similar to the recidivism rates for prison sentences. When the actual sentence is Probation and the recommended sentence is Prison, which occurs in 31% of prison recommended sentencing, the recidivism rates are also high." (Page 46)

These data also show the importance of the work of the Department of Corrections in developing effective community supervision strategies and community-based programs for less dangerous offenders.

Since the statewide implementation of the Sentencing Assessment Reports, which incorporate the Commission's recommendations, the prison population – as well as the recidivism rates of offenders released since implementation – has declined. The Report notes the reversal of the upward trend in prison population that started in November 2005 when the Sentencing Assessment Reports were implemented throughout the state:

"The low growth in the institutional population that coincided with the statewide

Jul-07	29,960	17	0.55	-1.09				

implementation of the sentencing assessment report (SAR) continued in FY07. The decrease in the prison population is in large part attributed to the reduction in new prison admissions in both FY06 and FY07. The expectation by the Commission when the Recommended Sentences were published was that the recommended sentences should encourage the courts to increase the referral rate for 120 day shock and treatment programs under 559.115 RSMo. and reduce prison sentencing for nonviolent offenders with little prior criminal history. At the end of July 2007 the population was 695 below the population on November 1, 2005 when the SAR was introduced. In the fiscal

year that preceded implementation the prison population increased by 855. The Department of Justice, Bureau of Justice Statistics, reported in June 2007 that, while nationally the prison population increased by 3.0% in FY06, Missouri had largest percentage reduction of 2.9%. The Department of Corrections also attributes the reduction in the prison population to lower recidivism rates because of the success of newly introduced reentry programs and to revised probation and parole supervision practices." (Report, pages 2-3)

The Commission's recommended sentences are based upon recent sentencing practices of Missouri's judges. The information that probation officers convey to courts and attorneys in the Sentencing Assessment Reports includes (1) analysis of risk factors for the offender, (2) supervision and offender management strategies for community-based sanctions or for prison-based programs, (3) the recommended sentences for the individual, and, where prison is possible, (4) disclosure of the Parole Board's guidelines and practices for paroling offenders in that category.

The Department of Corrections also is training probation officers in using the STATIC-99, a risk assessment method for sex offenders so that judges can be better informed in sentencing in such cases. The Report contains a study of recidivism rates and the STATIC-99 on Missouri offenders who had been assessed while in prison and have since been released. It is important that the use of such risk analysis instruments be studied on Missouri offenders to assure that it can provide useful information on our populations. It is anticipated that the STATIC-99 instrument will be in use in the preparation of Sentencing Assessment Reports sometime this fiscal year.

The Commission believes these cooperative efforts are creating an effective and coherent system of sentencing that will enhance public safety and promote the wise use of Missouri's correctional resources. If you would like further information on the matters covered in this Report, or on the work of the Commission, please feel free to call upon us.

Sincerely,

Judge Michael A. Wolff, Chair

cc: Adam Crumbliss, Chief Clerk, Missouri House of Representatives Terry Spieler, Secretary to the Senate

PREFACE

The Sentencing Advisory Commission is pleased to report on the continuing success of the system of the Recommended Sentences that the Commission introduced in June 2004. This is our third statutorily required report under Section 558.019.6(5) RSMo.

In cooperation with the Department of Corrections, the Commission has conducted two annual reviews of its recommended sentences and has maintained regular meetings of commission members and professional staff members of the Department of Corrections and the Office of the State Courts Administrator.

With the publication of a Recommended Sentences User Guide by the Commission it has been possible to reduce the content of the Biennial Report. The report covers the activity of the Commission and the changes to the Recommended Sentences since the last report in June 2005. The statistics on sentencing disparity and the death penalty included in previous reports have been updated and there are, in addition, two reports on special research subjects initiated by the Commission: a recidivism study of the STATIC-99 sex offender assessment and a recidivism study of the recommended sentences using historical data.

COMMISSION PROGRESS REPORT ON THE RECOMMENDED SENTENCES

1. Changes to the Recommended Sentences

The Commission's Recommended Sentences were first published in June 2004 and implemented during 2005. At the end of the 2006 legislative session the Commission reviewed the compliance statistics and decided to revise the Recommended Sentences for some violent and sex and child abuse offenses. The changes were detailed in the 2006 User Guide. The compliance review at the end of the 2007 legislative session indicated that no further changes to the sentencing matrix were required to ensure that the recommended sentences reflect Missouri sentencing practices. The User Guide for 2007/2008 following the completion of the 2007 legislative session, is being published simultaneously with the Biennial Report. The average sentence analysis by Missouri charge code upon which the offense severity is calculated is included as Appendix A and the 2007 Recommended Sentence Matrices are included as Appendix B.

2. <u>Impact of the Recommended Sentences upon the Prison Population</u>

The low growth in the institutional population that coincided with the statewide implementation of the sentencing assessment report (SAR) continued in FY07. The decrease in the prison population is in large part attributed to the reduction in new prison admissions in both FY06 and FY07. The expectation by the Commission when the Recommended Sentences were published was that the recommended sentences should

encourage the courts to increase the referral rate for 120 day shock and treatment programs under 559.115 RSMo. and reduce prison sentencing for nonviolent offenders with little prior criminal history. At the end of July 2007 the population was 695 below the population on November 1, 2005 when the SAR was introduced. In the fiscal year that preceded implementation the prison population increased by 855. The Department of Justice, Bureau of Justice Statistics, reported in June 2007 that, while nationally the prison population increased by 3.0% in FY06, Missouri had largest percentage reduction of 2.9%. The Department of Corrections also attributes the reduction in the prison population to lower recidivism rates because of the success of newly introduced reentry programs and to revised probation and parole supervision practices.

3. Court use of the Recommended Sentences

Since the statewide implementation of the Board of Probation and Parole's Sentencing Assessment Report (SAR) in November 2005 the Recommended Sentences have been included in all pre-sentence assessments requested by the courts. To the end of June 2007 there have been over 12,000 SARs requested by the courts.

SAR Requests

FY2005	538
FY2006	5,097
FY2007	6,458
	12,093

There has been a modest reduction in the time taken complete the SAR by the probation and parole officer compared to the time taken to complete the old Pre-Sentence Investigation (PSI). The SAR is a shorter, more structured report.

PSI and SAR Requests January 2005 to July 2007 Average Completion Time

PSI	42 days
SAR	37 days

In the year following the introduction of the SAR there was an increase in the rate at which pre-sentence assessments were requested by the courts compared to the year prior to the introduction of the SAR (FY05). In FY07 the percentage of sentences where an assessment was requested was the same as in FY05 (24.6%).

Pre-Sentence Assessments and New Felony Sentences

	SARs/		Percent
	PSIs	Sentences	of Sentence
FY2005	6,285	25,598	24.6%
FY2006	7,030	26,470	26.6%
FY2007	6,413	26,102	24.6%

4. Court Compliance with the Recommended Sentences

The court compliance with the Recommended Sentences is based upon the actual sentences of offenders received by the DOC following a court request for a SAR. On July 20th, 2007 there were 8,267 completed SARs with the actual sentence handed down by the courts.

Compliance with the Recommended Presumptive Sentence is 60.7% and 80.2% with the Recommended Sentence range from Mitigating to Aggravating.

Compliance with the Recommended Sentences

July 20, 2007	
Below Mitigating	4.8%
Mitigating to Presumptive	9.4%
Presumptive	60.7%
Presumptive to Aggravating	12.1%
Above Aggravating	13.0%

The overall picture indicates that the actual sentence is sometimes more severe than the recommended presumptive sentence. For all offenses there are 7.1 % fewer probation/CSS sentences than recommended and 3.9% more prison sentences than recommended.

Presumptive Recommended Sentence and Actual Sentence

	Recommended					
	Presumptive Sentence		Actual S	Sentence	Difference	
Disposition	# %		#	%	%	
Probation or CSS	5,800	70.2%	5,210	63.0%	-7.1%	
Shk/Trt	1,052	12.7%	1,317	15.9%	3.2%	
Prison	1,415	17.1%	1,740	21.0%	3.9%	
Total	8,267	100.0%	8,267	100.0%	0.0%	

The analysis by offense group indicates that violent and sex offenses are more likely to receive a more severe sentence than the recommended presumptive sentence.

- Violent offenses: Prison sentences are 6.8% higher
- Sex offenses: Prison sentences are 15.3% higher
- For Drugs, DWI and Non-violent offenses the differences are from 4.6% to -2.7%.

Presumptive Recommended Sentence and Actual Sentence By Offense Group

	Recommended		
	Presumptive	Actual	
	Sentence	Sentence	Difference
<u>Violent</u>			
Probation or CSS	51.1%	38.9%	-12.2%
120day Shock	11.1%	16.4%	5.4%
Prison	37.8%	44.6%	6.8%
Total	100.0%	100.0%	0.0%
Sex & Child Abuse			
Probation or CSS	48.5%	35.3%	-13.2%
120day Shock	9.5%	7.4%	-2.1%
Prison	42.0%	57.4%	15.3%
Total	100.0%	100.0%	0.0%
Non-Violent			
Probation or CSS	78.9%	71.6%	-7.4%
120day Shock	9.8%	12.5%	2.7%
Prison	11.3%	16.0%	4.6%
Total	100.0%	100.0%	0.0%
<u>Drug</u>			
Probation or CSS	74.5%	70.5%	-4.0%
120day Shock	14.8%	16.6%	1.8%
Prison	10.7%	12.9%	2.2%
Total	100.0%	100.0%	0.0%
<u>DWI</u>			
Probation or CSS	61.7%	54.0%	-7.7%
120day Shock	19.6%	30.0%	10.4%
Prison	18.7%	16.0%	-2.7%
Total	100.0%	100.0%	0.0%

5. <u>Compliance and the Recommended Mitigating, Presumptive and Aggravating Range</u>

The recommended sentence is more than just the Presumptive sentence. In the SAR the court are also given a mitigating and aggravating sentence. The following analysis compares the actual sentence to the range from Mitigating to Aggravating. The decision whether an actual sentence is within the range or outside the range is based upon the disposition when the recommended sentence was probation, CSS or Shock/Treatment. If the recommended sentence was a prison sentence then the compliance decision is based upon whether the actual prison sentence was within or outside the recommended sentence range.

The overall picture is that 82.2% of sentences are within the Mitigating to Aggravating range. There were 4.8% below the mitigating sentence and 13.0% above the aggravating sentence. When the actual sentence was prison the compliance percent is much lower (42.8%) and 53.9% of sentences were over the Recommended Aggravating sentence.

ACTUAL SENTENCE COMPARED TO THE RECOMMENDED SENTENCE RANGE

	R	Within the range of Below Mitigating to Above		Within the range of Mitigating to		hove		
	Mitigating		Aggravating			avating	Т	otal
Actual Sentence	#	%	#	%	#	%	#	%
Prison	58	3.3%	745	42.8%	937	53.9%	1740	100.0%
120day Shock	125	9.5%	1056	80.2%	136	10.3%	1317	100.0%
Probation/CSS	212	4.1%	4998	95.9%	0	0.0%	5210	100.0%
Total	395	4.8%	6799	82.2%	1073	13.0%	8267	100.0%

A prison sentence can be above the aggravating sentence because either the recommended aggravating sentence was a non-custodial sentence (probation, CSS or SHK/TRT) or the sentence was longer then the aggravating sentence. From the results of the SARs to July 27th 2007 36.4% are over the aggravating sentence because the recommended aggravating sentence was non-custodial and 63.6% because the prison sentence was longer than the aggravating sentence. The average difference between the aggravating sentence and the actual sentence is 3.8 years. For violent and sex offenses the difference is about 5.5 years and for nonviolent offenses the difference is less than 2 years.

	Recommended Aggravating Sentence			Percent	Average	Average
Offense	Probation or	Prison		Not	Aggravating	Actual
Group	CSS or Shk/Trt	Sentence	Total	Prison	Sentence	Sentence
Violent	-	213	213	0.0%	8.3	12.8
Sex	-	146	146	0.0%	8.3	13.9
Non-Violent	186	95	281	66.3%	3.7	5.5
Drug	131	88	219	59.8%	5.2	7.9
DWI	24	54	78	30.5%	3.4	5.2
Total	341	596	937	36.4%	6.7	10.5

The analysis by prior criminal history level indicates that 60.9% of level II sentences received a prison sentence when no prison sentence was recommended and the difference between the actual and recommended aggravating prison sentence is greater for offenders in Levels I and II than for offenders with multiple prison incarcerations.

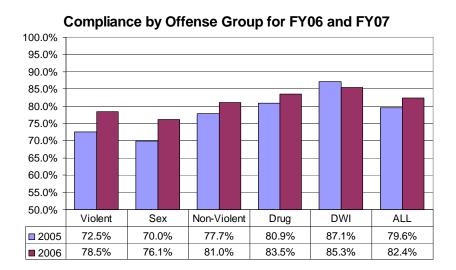

Prior Criminal	Recommended Aggravating Sentence			Percent	Average	Average
History	Probation or	Prison		Not	Aggravating	Actual
Level	CSS/Shk Trt	Sentence	Total	Prison	Sentence	Sentence
1	155	188	343	45.1%	7.1	12.4
2	160	102	262	60.9%	7.6	12.0
3	27	200	226	11.8%	5.8	8.7
4	0	77	77	0.0%	6.0	8.7
5	0	29	29	0.0%	8.0	10.5
Total	341	596	937	36.4%	6.7	10.5

The analysis by felony class indicates that for Class D offenses many prison sentences are over the aggravating sentence because most of the recommended sentences are non-custodial. For Class A felonies the difference in sentence length is substantial (8.8 years).

	Recommer	nded Aggravating	g Sentence	Percent	Average	Average
Felony	Probation or	Prison		Not	Aggravating	Actual
Class	CSS/Shk Trt	Sentence	Sentence Total		Sentence	Sentence
Unclassed	0	14	14	0.0%	7.2	16.8
A	14	119	134	10.7%	16.4	25.2
В	69	116	184	37.3%	7.1	10.8
C	165	281	446	37.0%	3.4	5.4
D	93	66	159	58.4%	2.1	3.6
Total	341	596	937	36.4%	6.7	10.5

6. Compliance by Offense Group for FY06 and FY07

The overall compliance with the Recommended Sentence range (from Mitigating to Aggravating) increased in FY07 compared to FY06, partly as a result of the changes to the recommended sentences in the 2006 User Guide and partly because of greater court compliance. For all sentences the compliance has increased from 79.6% in FY06 to 82.4% in FY07. The compliance has increased for all offense groups with exception of DWI offenses.

7. Compliance and the Prior Criminal History Level

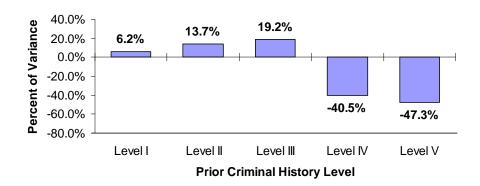

The recommended sentences increase the severity of the sentence with an increase of the prior criminal history. The SAR data indicates that actual sentencing does reflect an increase in the prior criminal history, particularly the percent prison disposition.

ACTUAL SENTENCES BY OFFENSE GROUP AND PRIOR CRIMINAL HISTORY Completed SARs and Offenders received by the DOC, May 2005 to July 20, 2007

		Pri	or Criminal Hist	orv	
	Level 1	Level 2	Level 3	Level 4	Level 5
	No felonies &				3 or more prison
	no more then 3	No prison & 1	One prison or 3	Two prison or 4	or 5 or more
Offense Group	misds	or 2 felonies	felonies	felonies	felonies
Violent					
Percent of PCHL	58.6%	17.2%	15.4%	4.5%	4.3%
Percent Prison Disposition	33.1%	46.0%	71.2%	68.0%	76.6%
Average Sentence	10.9	12.0	12.0	16.3	15.3
Sex & Child Abuse					
Percent of PCHL	64.9%	17.9%	10.3%	5.0%	1.9%
Percent Prison Disposition	49.5%	63.5%	75.5%	87.5%	88.9%
Average Sentence	10.6	12.7	14.8	9.0	20.5
NonViolent					
Percent of PCHL	54.6%	19.6%	12.3%	6.4%	7.1%
Percent Prison Disposition	5.5%	15.2%	29.3%	45.7%	48.5%
Average Sentence	4.1	4.0	4.0	4.3	4.9
Drug					
Percent of PCHL	54.4%	20.0%	15.0%	5.4%	5.1%
Percent Prison Disposition	3.9%	12.1%	26.4%	34.8%	48.1%
Average Sentence	7.0	6.0	5.9	6.6	7.6
DWI					
Percent of PCHL	44.1%	26.8%	17.6%	5.9%	5.6%
Percent Prison Disposition	3.7%	10.6%	33.1%	43.8%	55.6%
Average Sentence	3.5	4.3	4.2	5.4	4.0
All Offense Groups					
Percent of PCHL	54.6%	20.0%	14.1%	5.6%	5.6%
Percent Prison Disposition	11.8%	19.5%	36.7%	46.3%	52.7%
Average Sentence	9.0	8.1	7.8	7.4	7.7

Compliance, however, varies significantly by the prior criminal history level. Offenders with many prior convictions and incarcerations are likely to receive a more lenient sentence than the recommended presumptive sentence. Offenders with a level 3 history are most likely to be sentenced more severely than the presumptive recommended sentence.

The Difference between the Percent of Offenders who receive a Prison Sentence and the Percent of Offenders who are Recommended a Prison Sentence

8. Compliance By Sentencing County

The metro areas have a lower compliance than the first class counties and the rural counties.

ACTUAL SENTENCE COMPARED TO THE RECOMMENDED SENTENCE RANGE BY REGIONS

	Bel Mitig	low gating	Within the range of Mitigating to Aggravating		Above Aggravating		Total	
Circuits	#	%	#	%	#	%	#	%

9. Which Courts are requesting sentencing assessments (SARs)?

Overall 24.6% of new sentences have a requested a pre-sentence assessment but the rate at which assessments are requested varies greatly around the state. Some counties typically request an assessment for all convictions/guilty pleas while other counties rarely request an assessment or only for serious offenses. The data is a comparison of all new sentences received by the DOC in 2006 and the number of the requested assessments in 2006 by sentencing county

Counties that usually request an assessment (70% of the time or more) include, in descending order, Worth, Mercer, Holt, Jefferson, Clay, Lewis, and Buchanan. The metro areas, Jackson, St Charles, and the St. Louis metro area (City and County), are among the counties that have a low (under 15%) request rate for assessments. The median is 17%.

10. Assessments by type of Offender

Most assessments are for new sentencing of offenders who were not under supervision at the time of the offense. For offenders on probation or parole with new sentences the percent who have a court requested assessment is lower. In almost 60% of drug court cases the courts request a report from Probation and Parole. For drug courts, deferred prosecution assessments were included.

New Sentences in 2006 and Court Requests for Assessments

	Felony	P&P	Percent
Status of Offender	Sentence	Assessments	Requested
Drug Court	1,163	688	59.2%
New Court Commitment	5,336	2,178	40.8%
Probation	17,550	4,311	24.6%
Parole	2,396	268	11.2%
Total	26,445	7,445	28.2%

11. Plea Agreements

Plea agreements are made in 45% of sentencing for which SARs have been requested. The compliance rate is higher for the cases when there is a plea agreement.

A STUDY OF SENTENCING DISPARITY

The study covers three topics: Sentencing in Missouri compared to other states, differences in sentencing by circuit courts and differences in sentencing between different racial groups.

Sentencing and Time Served in Missouri compared to Other States in the US.

The National Corrections Reporting Program (NCRP) published by the Bureau of Justice Statistics for 2003 indicated that offenders in Missouri serve about five months longer in prison than the national average; however, as a percent of sentence time served, Missouri is similar to the national average (46.8%). From DOC records and the NCRP report for 1993, 2000 and 2003, it is apparent that that time served has increased not only in Missouri but also in other states over the last ten years but that the increase has slowed since 2000.

Average Sentence and Time Served to First Release (1993 to 2003)

	Al	l State Priso	ons	Missouri			
	Max. Time Perce			Max.	Time	Percent	
	Sentence Served Sentence			Sentence	Served	Sentence	
	(mths)	(mths)	Served	(mths)	(mths)	Served	
1993	66.0	21.0	31.8%	68.0	23.0	34.4%	
2000	65.0	65.0 28.0		72.0	31.0	43.3%	
2003	62.0	29.0	46.8%	72.9	33.8	46.4%	

Source: NCRP reports (BJS) and DOC records

For many offenses, the average sentence and time served in Missouri is higher than in other states but there could be differences in definitions between BJS and the Missouri DOC in the data collections. Offenders with violent offenses serve a higher percent of sentence in Missouri than in other state prisons but offenders with non-violent and drug offenses serve a lower percent of sentence than in other state prisons.

Sentencing Differences Between Courts

When circuits are compared by sentence disposition or by average prison sentence there are wide variations in sentencing practice. Using the sentence data compiled by the Department of Corrections for FY07, the 45 Missouri circuit courts have been ranked using three measures:

- 1 Prison sentences as a percentage of all sentences
- The range is from 49.7% for circuit 18 (Cooper and Pettis counties) down to 7.7% for circuit 41 (Macon and Shelby). The average percentage is 24.1%. St. Louis City (21.6%), St. Louis County (20.3%) and Jackson County (18%) are slightly below the state average.
- 2 Shock and Treatment as a percentage of Prison and Shock and Treatment Sentences The range is from 70.6% for circuit 5 (Carroll and Ray counties) down to 13% for circuit 18 (Cooper and Pettis counties). The average percentage is 31.6%. Jackson County (39.2%) is in the second quartile and St. Louis City (28.4%) is in the third quartile and St. Louis County (23.1%) is in the fourth quartile.
- 3. Average Prison Sentences
- St. Louis City has the highest average prison sentence (8.2 years) and Circuit 37 (Carter, Howell, Oregon and Shannon) has the lowest average sentence (3.5 years).

Although these rankings indicate that sentencing standards appear very different between courts, small numbers may add to variability and there may be differences in the level of crime, the type of crime and in the prior criminal history of the offender population. For example, St. Louis City has a higher percentage of violent crime than other circuits and that would explain the high average prison sentence in St. Louis City. The high volume of crime in St. Louis may explain the low proportion of sentences that result in a prison sentence.

To account for some of the underlying factors, the data has been aggregated into three types of circuit court based upon the size of the resident population and sentencing has been compared for similar offense groups. This analysis is presented after the circuit court ranking charts.

Comparing sentencing when grouped into three geographical areas based upon size of population (Metropolitan, Other First Class Counties and Rural) indicates that the greatest differences are between the metropolitan areas and the rest of the state. The metropolitan areas have the highest prison sentences but the lowest percentage of prison sentences. Rural counties have higher percentages of probation and shock and treatment sentences than first class counties. Within the metro areas Jackson County has the highest percent of shock and treatment sentences but all three metro counties have similar prison percentages.

New Sentencing and DOC Commitment, FY07 All Offenses

		Per	Percent Disposition					
			Shock/		Sentence			
Circuits	Sentences	Probation	Treatment	Prison	(yrs)			
Jackson Cnty	2,515	64.5	13.9	21.6	7.1			
St Louis Cnty	2,903	73.6	6.1	20.3	6.7			
St. Louis City	2,398	69.8	8.6	21.6	8.2			
Metro	7,816	69.5	9.4	21.1	7.3			
First Class	8,019	60.6	10.5	28.8	5.5			
Rural	10,003	64.3	13.0	22.7	5.8			
Total	25,838	64.7	11.1	24.1	6.1			

Metro: 16, 21, 22

First Class: 5, 6, 7, 11, 13, 17, 19, 20, 23, 26, 29, 31, 32

Rural: 1, 2, 3, 4, 8, 9, 10, 12, 14, 15, 18, 24, 25, 27, 28, 30, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44,

Comparing the three geographical areas for similar offenses reduces the disparity in prison sentences but the differences in sentence disposition remain. The metro areas have the lowest percent of sentences receiving prison sentences. This is true for drugs, DWI and other non-violent offenses. For violent offenses there is a much greater similarity in sentencing. For Class A, B and C felony violent offenses there is very little difference in disposition or prison sentence between the metropolitan counties and the other counties. For Class D violent offenses there is a difference.

Sentencing Disparity by Race

The most significant indicator of sentencing disparity by race is the incarceration rate in relation to the respective populations of Blacks, Hispanics and Whites. The Missouri incarceration rate for Blacks is over five times that of Whites and nationally the Black rate is over six times the White incarceration rate. The incarceration rate for Hispanics in Missouri is lower than for Whites and is only half the national rate for Hispanics, in contrast to the national statistics where Hispanics are incarcerated at a rate nearly three times that of Whites

Incarceration Rate By Race, 2005 Rate per 100,000 population

	Missouri	US
Black	1,979	1,441
Hispanic	314	605
White	370	238
Total	529	435

Source: BJS Prisoners in 2005, table 4

There are many factors, including socio-economic factors, that play an important part in explaining the differences in incarceration rates between racial and ethnic groups. The analysis the Commission has conducted attempts to identify the relative impacts of severity of offense, prior criminal history and time served in Missouri. The results of a statistical based multiple regression analysis are reported in the last section on the study of sentencing disparity (pages 32,33).

Using the sentencing data for FY07, the comparison between the four racial or ethnic groups indicates that Blacks have the highest average prison sentence, 7.2 years compared to an average of 5.6 years for Whites. The aggregate data also indicates that Hispanics have the highest percentage of prison sentences (34.1%) and Whites have the highest percentage of probation sentences (65.6). 'Other' includes Native Americans and Asian and Pacific Islanders.

Total	25,926	64.6	11.2	24.2	100.0	6.1			

i. Severity of Offense

The disparity in average prison sentences between races could be explained by differences in the types of offense committed by the different races. Calculating the sentencing indicators by race for each offense group (violent, sex, nonviolent, drugs and DWI) will indicate whether differences in the types of offense are important. For DWI offenses there is little difference in average sentencing between Blacks and Whites but for the other offense types there still are still differences in average sentencing. The differences are, however, much reduced when the racial comparison is made by offense type and felony class.

The analysis by offense type and felony class has only been completed for sex, child abuse and violent offense groups because those offense groups include a wide range of offenses from Class D to Class A. An example of sentencing between the races being very similar is for Class A violent offenses where the average prison sentence is 17.4 years for Blacks and 17.7 years for Whites (page 27). Not all differences between the races are explained by the offense group and the felony class. For unclassified sex offenses (forcible rape/forcible sodomy/statutory rape 1st degree/statutory sodomy 1st degree) the average prison sentence for Whites (14.8 years) is longer than the average prison sentence for Blacks (13.6 years). For Class C violent offenses Whites are more likely to receive probation than Blacks (55.7% Whites, 50.8% Blacks).

ii. Prior Criminal History

Blacks have the highest percentage of offenders with prior felony convictions (Levels 2-5). At each level of prior criminal history, however, Blacks have a longer average prison sentence and a higher percentage of offenders with a prison sentence. The differences between Blacks and Whites are greatest for Level II and Level III. For Level II the average prison sentence for Blacks is 1.7 years longer than for Whites and for Level III the difference is 1.8 years.

Including the severity of the offense into the analysis for Level I offenders increases the disparity in sentencing between Blacks and Whites for Violent offenses (40.0% prison for Blacks compared to 23.3% for Whites) and Drugs (5.4% prison for Blacks compared to 3.6% for Whites). It reduces the disparity for Sex offenses (Blacks 44.6%, Whites 48.1%) and Nonviolent offenses (Blacks 6.7%, Whites 7.7%). DWI sentencing is neutral.

Time Served Disparity by Race

The previous analysis examined variations in sentencing by race but the disparity that results in Blacks having a much higher incarceration rate than other races could also be the result of the release practices of the Missouri Board of Probation and Parole. For offenders sentenced to a prison sentence the Board of Probation and Parole has the discretionary responsibility to determine the release date, subject to statutory restrictions on minimum prison time and the statute that defines conditional release.

In FY07 the Department of Corrections released 5,464 offenders to the first release in their commitment. The average time served was 33.7 months and that comprised 47.5%

of the aggregate sentence. Blacks served significantly more time than Whites (44.4 months compared to 28.9 months) in part because Blacks on average were sentenced to longer sentences (83 months compared to 65.7 months). As a percent of sentence Blacks also served longer than Whites (53.5% compared to 44.0%).

Time Served, First release in commitment, FY07

		Aggregate	Time	
	First	Sentence	Served	Percent
Race/Hispanic	Releases	(mths)	(mths)	Served
Black	1,697	83.0	44.4	53.5%
Hispanic	125	60.9	24.7	40.6%
White	3,614	65.7	28.9	44.0%
Other	28	60.1	31.9	53.1%
Total	5,464	70.9	33.7	47.5%

The analysis by offense group does not reduce the difference in the percent of sentence served between Blacks and Whites for four of the five offense groups. The exception

is for Sex and Child Abuse offenses, where the majority of offenders are released on or after the conditional release date.

Board release decisions are based upon a parole hearing and a guideline release date that is determined by a salient factor risk assessment. The salient factor risk score includes measures of prior criminal history, institutional adjustment and other factors that have been tested to be correlated with recidivism. The salient factor risk score is race neutral. The final test for disparity in time served by the Board of Probation and Parole is, therefore, to measure the compliance by the Board with the guideline release dates for each of the races.

Time Served and Guideline Time Served, FY07
Includes offenders required to serve minimum mandatory prison terms (MMPT)

			Time		Guideline	Guideline
Race/		Sentence	Served	Percent	Time	Percent
Hispanic	Releases	(mths)	(mths)	Sentence	(mths)	Sentence
Black	2,082	80.9	39.1	48.3%	31.6	39.1%
Hispanic	146	67.1	26.1	38.9%	22.1	32.9%
White	4,483	65.5	26.0	39.7%	20.0	30.5%
Other	40	57.0	27.5	48.2%	19.9	34.9%
Total	6,751	70.2	30.1	42.9%	23.6	33.6%

For all offenders with a salient factor based guideline release date and released in FY07 the average guideline time served was 23.6 months and the actual time served was 30.1 months. Reasons for the longer than guideline stay include statutory minimum prison terms. Black offenders served an average of 13.1 months longer than Whites in actual time and an average 11.6 months in guideline time. As a percent of sentence served between the races is close (8.6% for actual time served compared to 8.5% for guideline time served). The longer time served by Blacks is attributed to higher risk factors.

Difference between Black and White Offenders, FY07

	Black	White	Difference	Percent
	(mths)	(mths)	(mths)	Sentence
Actual Time Served	39.1	26.0	13.1	8.6%
Guideline/MMPT Time Served	31.6	20.0	11.6	8.5%

Statistical Analysis of Sentencing Using Multiple Regression

A regression analysis was undertaken as an aid to understanding the extent of race in sentencing. An advantage of statistical techniques is the ablility to explain the interrelationships between a number of variables, subject to the assumptions underlying the statistical technique. The most important requirement of a regression model is the need to express all the variables as numeric (not simply rankings).

Using two years of sentencing data from FY05 to FY07 a stepwise multiple regression was completed with seven predictors of the sentence disposition. The independent variables were:

- admission type (probationer or parolee at time of offense or not under supervision),
- > offense severity (felony class, offense group and severity),
- prior criminal history level
- > age
- gender
- > race
- > type of sentencing county (Metro, First Class or Rural)

For sentence disposition (Probation, Shock/Treatment and Prison) as the dependant variable the seven independent variables explained 63% of the variation (R square). The most important explanatory variables were admission type (whether the offender was a new commitment or a probation/parole violator), prior criminal history and offense severity in that order. These three variables explained 62.6% of the model. Race was not a significant variable and was not included in the final stepwise regression variable set..

The model was re-run using length of sentence as the dependant variable for offenders sentenced to prison. This model, which was examining the relationships between the variables for offenders who in most cases had significant prior criminal history, produced a different set of variable rankings. Overall the model explained less of the variance (40.8%) and by far the most important variable was offense severity. Age, race and prior

Summary Statistics: Stepwise Regression to Explain Sentence Disposition New Sentencing July 05-June 07

			Prison O	nly
Dependant Variable	Sentence Disposition		Sentence Le	ength
	Standardized		Standardized	
	Beta		Beta	
	Coeffs.	Ranking	Coeffs.	Ranking
New Commit/Probationer/Parolee	0.648	1	0.049	5
Offense severity	0.094	3	0.628	1
Prior criminal history	0.311	2	0.062	4
Geography (Metro, First Class, Rural)	0.023	6	ns	
Gender	0.027	5	ns	
Race	0.009	7	0.068	3
Age	0.044	4	0.069	2
Regression coeff.	0.794		0.638	
R Square	0.630		0.408	

criminal history were significantly correlated to length of sentence but they contributed less than 5% to the overall regression coefficient. Gender and geographic locality were not significant.

A conclusion of the regression analysis is to suggest that race is not a significant factor in the sentencing decision. Most of the variation in sentencing is attributed to prior criminal history, whether the offender is a supervision violator or not and the offense. Race, age, gender and geography are related to the type of offense and to the level of prior criminal history. The relationships are statistically significant but small (4.1% and 9.1% respectively).

DEATH PENALTY SENTENCING

The study analyzes recent trends in prison admissions for murder, including sentences that require the death penalty, and provides measures that identify racial disparity in the application of capital punishment.

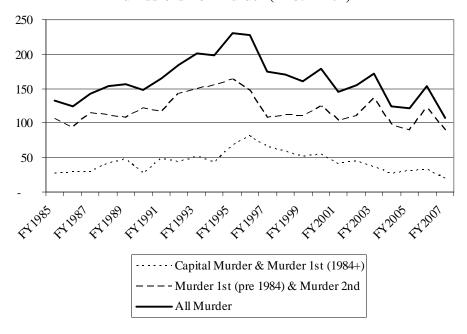

Sentencing for Murder (565 RSMo.)

The death sentence for murder was re-imposed in Missouri in 1977 as capital murder and the authorized sentences were the death penalty or life with no parole for 50 years. In October 1984 Capital Murder was replaced by Murder 1st degree and the authorized sentences were the death penalty or life without parole. Prior to October 1984 Murder 1st degree had an authorized sentence of life with parole eligibility. The death penalty analysis for Murder 1st degree includes sentences of capital murder but excludes sentences of Murder 1st degree for offenses committed prior to October 1984. The sentencing data used in this review uses the first sentencing decision. Following appeals against the death penalty the original decision may be later reversed.

Admissions for Murder

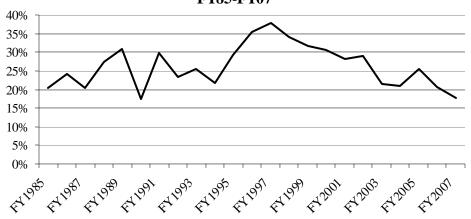

Prison admissions for Murder have been declining since FY95 and the decline in Murder 1st degree admissions has been the greater. In FY95 there were 230 admissions for Murder and 108 in FY07.

Admissions For Murder (FY85-FY07)

In FY97 Murder 1st degree admissions accounted for 38% of murder admissions and in FY07 the percentage was down to 18%.

Murder 1st Degree as Percent of Murder Admissions FY85-FY07

The application of the death penalty

In January 2006 a decision by a US District Court on the constitutionality of Missouri's method of execution placed a moratorium on executions. The 8th Circuit Courts of Appeals vacated that decision in June 2007. The last execution in Missouri at the time of this review (September 2007) was in October 2005.

Although the percentage of offenders convicted of Murder 1st degree and sentenced to death has fluctuated from year to year the trend has been downwards. In FY2006 there were no offenders received by the DOC with the death penalty and in FY07 there was one offender received (5% of Murder 1st degree admissions).

TOTAL	864	133	997	13%	67

Is there racial disparity in the application of the death penalty?

Commitment rates for murder indicate that Blacks are ten times more likely to be convicted of murder than Whites.

Average Murder Commitment Rates per 100,000 population

	FY85-FY95	FY96-FY07
Black	16.2	14.0
White	1.6	1.3
Total	3.3	2.8

Commitment rate is:

Annual admissions for murder/Missouri population (Census 1990, 2000)* 100,000

The indicators used to measure racial disparity in the application of the death penalty are:

- The percent of offenders convicted of Murder I that receive the death penalty
- The percent of offenders who are convicted of Murder receive the death penalty

The two measures indicate that Whites are more likely to receive the death penalty than Blacks and the disparity has increased since FY96. From FY85 to FY95 15.7% of Blacks convicted of Murder 1st degree received the death sentence compared to 23.8% of Whites. In the period FY96-FY07 5% of Blacks convicted of Murder 1st degree received the death sentence compared to 12.3% of Whites. Although the percent of offenders receiving the death sentence has declined the difference between Whites and Blacks has increased as a ratio from 1.51 to 2.44. Since FY96 Whites are more than twice as likely to receive the death sentence than Blacks.

Racial Differences in the Percent of Murder Convictions with the Death Penalty FY85-FY95

	All		Death	Percent De	ath Penalty
	Murder	Murder 1st	Penalty	Murder	Murder 1st
Black	1,045	235	37	3.5%	15.7%

Total	1,847	534	44	2.4%	8.2%
Ratio: Percent White to Percent Black				2.82	2.44

Is there a geographical disparity in death penalty cases?

The metro areas have the lowest percent of Murder 1st degree offenders sentenced to death (8.9%) but St. Louis County is much more similar to the rural counties. First class counties impose the death sentence most often (24.5%).

Death Penalty Sentencing by Sentencing County FY85-FY07

		Death	Percent
Counties	Murder 1st	Penalty	Death P.
St. Louis City	170	11	6.5%
St. Louis County	133	24	18.0%
Jackson County	307	19	6.2%
Total Metro	610	54	8.9%
First Class	212	52	24.5%
Rural	175	27	15.4%
TOTAL	997	133	13.3%

Is there a racial disparity by sentencing county in death penalty cases?

During the period FY85-FY07, St. Louis City and the First Class Counties sentenced a higher percentage of Blacks convicted of Murder 1st degree to the death penalty than Whites. Whites were more likely to be sentenced to the death penalty in Jackson County and St. Louis County and the percentages were about the same in the rural counties.

Death Penalty Sentencing By Race and Sentencing County FY85-FY07

A RECIDIVISM STUDY OF THE STATIC-99 SEX OFFENDER RISK INSTRUMENT

The Department of Corrections is reviewing the use of the STATIC-99 sex offender risk instrument by the Division of Probation and Parole as part of the Sentencing Assessment report. Because the institutional Missouri Sex Offender Program has been using the STATIC-99 as an initial screening assessment a recidivism study was completed on the offenders who had been assessed on the STATIC-99 and released. The study was completed in April 2007.

1. Recidivism Rates and the STATIC-99

A recidivism analysis has been completed for 808 released Missouri sex offenders who have had a STATIC 99 assessment while incarcerated. The STATIC-99 has been routinely completed by the Missouri Sex Offender Program since 2002. Because the earliest release was in 2003 the time period of the recidivism analysis has been restricted to three years. Sex offender recidivism calculations are normally based on 5 years to 15 years. The results indicate that the STATIC 99 assessment is a valid indicator of the likelihood of a return to prison for technical or law violations. As the risk score increases so does the percent of offenders returned. The difficulty in validating the accuracy of any risk instrument by measuring the rate of repeat criminal sexual behavior is the long time period necessary to record new sex convictions. Of the 808 offenders released only five have new sex convictions (0.6% return rate) and three have convictions for failing to register as sex offenders.

Missouri Releases of Sex Offenders with completed STATIC-99 (2003-2007)

	Rele	ased		Time Fro	m Release		Percent returned				
STATIC-99 Risk Level	N	Percent	6 mths	12 mths	2 yrs	3 yrs	6 mths	12 mths	2 yrs	3 yrs	
Low (0-1)	275	34%	224	167	84	22	9.4	13.2	21.4	18.2	
Low-Moderate (2-3)	373	46%	308	252	158	65	12.0	18.7	31.6	32.3	
Moderate-High (4-5	132	16%	106	91	50	19	14.2	25.3	34.0	26.3	
High (6+)	28	3%	21	17	12	5	19.0	35.3	41.7	60.0	
Total	808	100%	659	527	304	111	11.7 18.6 29.6				

Other STATIC-99 Validation Studies

Thornton, a co-author of the STATIC-99, has published sex offense recidivism rates based on a sample of 1,086. The five year recidivism rate is 18% and the rate increases to 26% after 15 years.

An internet search found an evaluation study of the STATIC-99 by James Austin of the Institute on Crime, Justice and Corrections for the Pennsylvania Board of Probation and Parole in 2003. The study was based upon 356 sex offenders released to parole in Pennsylvania and tracked for 5 years. The reported recidivism rates indicated that the STATIC assessment was predictive of a return to prison for a violation of supervision but no rates were published for new sexual convictions.

Pennsylvania Five Year Follow Up Study of Sex Offenders (1995-2001) Released to Parole

	Rele	ased	Percent Returned			
STATIC-99 Risk Level	N	Percent	PA 5 yrs	MO 3 yrs		
Low (0-1)	85	24%	32.9	21.1		
Low-Moderate (2-3)	113	32%	54.9	35.7		
Moderate-High (4-5	99	28%	70.7	31.3		
High (6+)	59	17%	61.0 60.0			
Total	356	100%	55.1	33.3		

For comparison the Missouri STATIC-99 three year rates are shown alongside the Pennsylvania five year rates.

2. Comparing the STATIC-99 Risk Assessment with the SAR assessments for Sex Offenders

An important consideration in including the sex offender assessment into the SAR is the impact upon the choice of the recommended sentence and the salient factor risk assessment that is calculated by the SAR writer. Based upon a comparison between the STATIC-99 assessments completed by MOSOP and the SARs so far completed for sex offenders the STATIC-99 risk score will be similar to the Salient Factor risk assessment but more severe than the Prior Criminal History Level that determines the recommended sentence. The STATIC-99 places 34% of offenders in the lowest category compared to 33% of the Salient Factor score and 66% in Level I of the prior criminal history (no prior felonies).

Risk Distribution of STATIC-99, Prior Criminal History and Risk Scores for SAR sex offenders All STATIC-99 assessments by MOSOP and all SARs recorded in the Lotus program

	STAT	TC-99	Prior	Criminal H	listory	SAR Risk Score			
STATIC-99 Risk Level	N	Percent	Level	N	Percent	Score	N	Percent	
Low (0-1)	934	34%	I	403	66%	Good	204	33%	
Low-Moderate (2-3)	1,224	45%	II	100	16%	Above Avg.	185	30%	
Moderate-High (4-5	472	17%	III	65	11%	Avg.	136	22%	
High (6+)	120	4%	IV	28	5%	Below Avg.	56	9%	
			V	13	2%	Poor	28	5%	
Total	2,750	100%	Total	609	100%	Total	609	100%	

3. Validating the individual STATIC 99 risk factors

Although MOSOP has been entering the STATIC-99 total score into a spreadsheet the individual factor scores have not been recorded electronically so based upon a records search of 471 offender files by the research unit the individual scores have been extracted and summed. It is interesting to note that the highest scoring factor is 'Any unrelated victim' that contributed 30% to the total score. Prior sex offenses contributed 8.9% to the total score. Future analysis will be to calculate the recidivism rates for each of the factors to ensure that they all contribute to the total risk score. The Pennsylvania study also found that 'Any unrelated victim' was the highest scoring factor and it was moderately predictive of recidivism. One concern of the Pennsylvania study was the Age scoring. Their analysis suggested that the risk level at 25 years was too low and should be increased to 45 years.

Risk Factor Scoring for MOSOP STATIC-99 Assessments

Risk Factor	Range	Score	Percent
Young (under 25)	0,1	78	6.6%
Ever Lived With	0,1	168	14.3%
Index Non-sexual violations, any convictions	0,1	55	4.7%
Prior non-sexual violence Any convictions	0,1	116	9.9%
Prior Sex offenses Total Score	0-3	105	8.9%
Prior Sent. Dates	0,1	100	8.5%
Any Convictions for non-contact sex offenses	0,1	28	2.4%
Any Unrelated Victims	0,1	353	30.0%
Any Stranger Victims	0,1	88	7.5%
Any Male Victims	0,1	84	7.1%
Total Score	0-12	1,175	100.0%
STATIC-99 assessments		471	

RECIDIVISM RATES FOR THE RECOMMENDED SENTENCES

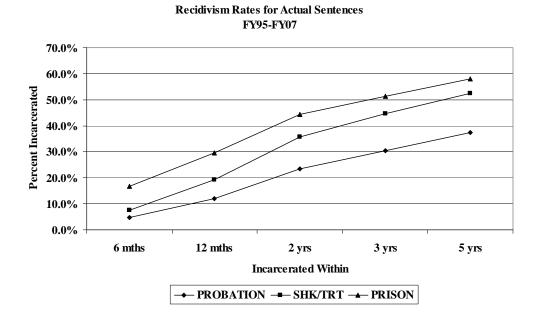

The Sentencing Commission is aware that a prison sentence is not always the sentence that has the best chance of success in reducing future recidivism. Prison can reinforce criminal behavior and permanently damage family, social and employment connections. Identifying alternative non-prison sentences that enable community rehabilitation to occur is an important responsibility for the Commission. The following Commission study on the relationship between the recommended sentences and recidivism is a preliminary investigation into how to develop recommended sentences that extend the range of non-prison sentences that have been demonstrated in Missouri to lower recidivism.

Using the sentencing data in the Department of Corrections OPII database average recidivism rates have been calculated for offenders sentenced between July 1995 and June 2007. Two measures of recidivism are calculated:

- The first incarceration following the start of the new probation or the release from prison. The incarceration may be for a technical violation or for a new sentence.
- The first new conviction following the start of the new probation or release from prison. The new conviction may be a prison or probation sentence.

The calculations are intended to be measures of validity of the recommended sentences - not measures of court compliance because the Recommended Sentences were not published until June 2004 and not implemented until June 2005.

The first step in the study is to establish whether actual sentencing is correlated with future recidivism. There is an expectation that sentencing should reflect recidivism risks and offenders with low risks of recidivism can be sentenced to probation while offenders with high risks of recidivism should be sentenced to prison. This is the case in Missouri. Offenders sentenced to probation do have lower rates of recidivism. Probationers are

Average Recidivism Rates for New Unrelated Sentences FY95-FY07

Actual			Percent in Prison within Percent with new conviction within								
Sentence	Sentences	6 mths	12 mths	2 yrs	3 yrs	5 yrs	6 mths	12 mths	2 yrs	3 yrs	5 yrs
PROBATION	190,391	4.7%	11.9%	23.5%	30.4%	37.5%	0.7%	2.7%	6.8%	10.1%	14.8%
SHK/TRT	34,105	7.6%	19.3%	35.7%	44.7%	52.3%	0.9%	4.3%	11.3%	16.5%	23.3%
PRISON	54,646	16.7%	29.4%	44.3%	51.4%	58.0%	0.8%	3.8%	11.2%	17.2%	27.3%

20% less likely to be later incarcerated than offenders released from prison and the new conviction rate after five years for probationers is half that of prison releases. Sentencing is, however, the combination of offense severity and prior criminal history and the recommended sentencing model assumes that at a certain level of prior criminal history probation is no longer the low recidivism sentence.

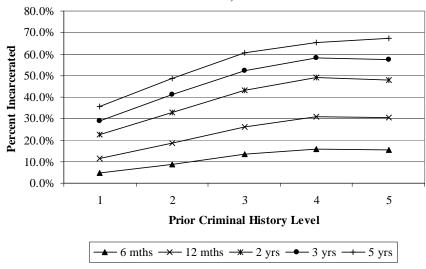

Recidivism Rates After Two Years by Type of Sentence and Prior Criminal History FY95-FY07

		Prior	Criminal History	Level	
	I	2	3	4	5
	No Prior				
	Felonies,no more	1/2 felonies, no	1 incarceration or 3	2 incarcerations or	3+ incarerations or
Sentence	than 3 misd.	incarceration	felonies	4 felonies	5+ felonies
Probation	20.2%	28.2%	38.0%	45.2%	45.1%
Shk/Trt	30.3%	36.9%	42.0%	47.8%	50.1%
Prison	35.6%	43.9%	48.9%	52.8%	48.7%
Total	22.4%	33.7%	43.3%	49.2%	47.9%
Recidivism Gap					
Probation-Prison	15.4%	15.7%	10.9%	7.5%	3.6%

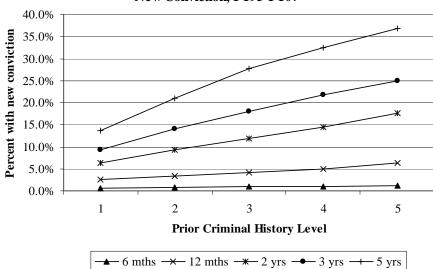

From the analysis of FY95-FY07 new sentencing there is a 15% difference in recidivism after two years between Level 1 and Level 2 offenders sentenced to probation and those sentenced to prison. For Level 5 offenders the gap between probation and prison recidivism is less than 4%. These figures are based upon actual sentencing.

The second step in the study is to test the validity of the prior criminal history measure developed by the Sentencing Commission. The analysis indicates that recidivism increases with increases in the prior criminal history level. The recidivism rate is cumulative from six months to five years from the start of supervision. Although there is little difference in the rates of future incarceration for Level 5 compared to Level 4 the rates of new convictions for Level 5 are higher than Level 4.

DOC OPII data

If the measure of prior criminal history is related to recidivism then it is expected that the recommended sentences should also be related to recidivism. The third test is, therefore, to calculate recidivism rates for the recommended presumptive sentence.

The recidivism rates are lowest under the recommended sentences system when the recommended sentence is probation. The recidivism increases for recommended sentences of Community Structured Supervision (CSS) and are highest for prison and shock and treatment programs. There is little difference in recidivism rates between Shock/Treatment and prison recommended sentences but the recidivism rates for Shock/Treatment are no higher than prison sentences. For actual sentencing (page 46) the re-incarceration rates of offenders sentenced under the 120 day statute are lower than prison re-incarceration rates for all the time periods under review. There is, however, little difference between Shock/Treatment and prison for new conviction rates (page 46).

Average Recidivism Rates and Recommended Presumptive Sentences FY95-FY07

Recommended			Percen	t in Prison	within		Percent with new conviction within					
Sentence	Sentences	6 mths	12 mths	2 yrs	3 yrs	5 yrs	6 mths	12 mths	2 yrs	3 yrs	5 yrs	
PROBATION	146,574	4.4%	11.3%	22.3%	28.9%	35.7%	0.7%	2.6%	6.5%	9.5%	14.1%	
CSS	73,816	8.2%	17.7%	31.5%	39.3%	46.6%	0.7%	3.1%	8.5%	12.9%	19.2%	
SHK/TRT	32,498	13.8%	26.7%	44.0%	53.0%	61.5%	1.0%	4.4%	12.5%	18.9%	29.0%	
PRISON	24,910	14.3%	27.8%	44.1%	52.7%	59.9%	0.9%	4.5%	12.9%	19.3%	28.4%	

<u>Drawing Conclusions from the differences in outcomes between the Recommended Sentences and Actual Sentences</u>

It is interesting to compare the recidivism rates for actual and recommended sentences and identify the differences in recidivism rates when actual sentences disagree with the recommended sentences. When the recommended sentence is probation and the actual sentence is also probation, which occurs in 77% of probation recommended sentencing, the recidivism rates are low. When the recommended sentence is Probation and the actual sentence is Prison then the recidivism rates are much higher, whether measured by new incarcerations or new convictions and the rates are similar to the recidivism rates for prison sentences. When the actual sentence is Probation and the recommended sentence is Prison, which occurs in 31% of prison recommended sentencing, the recidivism rates are also high.

- The case where probation was recommended but prison was imposed could be an instance where sending an offender to prison enhances the risk of re-offending and prison was not the best sentence.
- The case where an offender was sentenced to probation when prison was the recommended sentence is an instance where public safety would be better served by greater court compliance.

Average Recidivism Rates of Recommended and Actual Sentences

Recommended	Actual			Percer	nt in Prison	within			Percent with new conviction within				
Sentence	Sentence	Sentences	6 mths	12 mths	2 yrs	3 yrs	5 yrs	6 mths	12 mths	2 yrs	3 yrs	5 yrs

The Commission is continuing to research how to incorporate alternative non-prison sentences that have greater chances of success in reducing recidivism.

APPENDIX A

Average Sentence Statistics by offense from FY2000 to FY2007

The averages are used to determine the offense severity level within each offense group and felony class. Offenses whose averages are within one standard deviation of the group/felony class average are classed as medium severity. Averages that are above one standard deviation are classed as high severity and those offenses below one standard deviation are classed as low severity. New sentences or sentences with few entries are classed as medium severity.

The sentencing data is extracted from the DOC OPII database and includes the first sentence for unrelated sentences. Related sentences is are sentences at the same court and on the same day for the same offender. Where there is more than one related sentence, the most serious sentence is selected. Revocations of sentences are not included. Prison sentences include only sentences for which a term sentence was handed down. Sentences of SES probations and 120 day probation sentences are not included in the sentence length averages.

RECOMMENDED SENTENCES - DWI OFFENSES

For all cases where a community- based sentence is recommended, the commission recommends referral to a drug court where available and where the offender is eligible.
